Dr. Roy Spencer, (256) 961-7960

roy.spencer@nsstc.uah.edu

Pacific cooling fades and temperatures rise

Global Temperature Report: May 2011

Global climate trend since Nov. 16, 1978: +0.14 C per decade

May temperatures (preliminary)

Global composite temp.: +0.13 C (about 0.23 degrees Fahrenheit) above 30-year average for May.

Northern Hemisphere: +0.14 C (about 0.25 degrees Fahrenheit) above 30-year average for May.

Southern Hemisphere: +0.12 C (about 0.22 degrees Fahrenheit) above 30-year average for May.

Tropics: -0.04 C (about 0.07 degrees Fahrenheit) below 30-year average for May.

April temperatures (revised):

Global Composite: +0.12 C above 30-year average

Northern Hemisphere: +0.20 C above 30-year average

Southern Hemisphere: +0.04 C above 30-year average

Tropics: -0.23 C below 30-year average

(All temperature anomalies are based on a 30-year average (1981-2010) for the month reported.)

Notes on data released June 8, 2011:

Color maps of local temperature anomalies may soon be available on-line at:

<http://nsstc.uah.edu/climate/>

The processed temperature data is available on-line at:

vortex.nsstc.uah.edu/data/msu/t2lt/uahncdc.lt

As part of an ongoing joint project between UAHuntsville, NOAA and NASA, Dr. John Christy, a professor of atmospheric science and director of the Earth System Science Center (ESSC) at The University of Alabama in Huntsville, and Dr. Roy Spencer, a principal research scientist in the ESSC, use data gathered by advanced microwave sounding units on NOAA and NASA satellites to get accurate temperature readings for almost all regions of the Earth. This includes remote desert, ocean and rain forest areas where reliable climate data are not otherwise available.

The satellite-based instruments measure the temperature of the atmosphere from the surface up to an altitude of about eight kilometers above sea level. Once the monthly temperature data is collected and processed, it is placed in a “public” computer file for immediate access by atmospheric scientists in the U.S. and abroad.

Neither Christy nor Spencer receives any research support or funding from oil, coal or industrial companies or organizations, or from any private or special interest groups. All of their climate research funding comes from federal and state grants or contracts.
